Usage limits

This is a reconciliation diagnostic on the files provided, not an audited financial statement. The recoverable figure applies a stated recovery-rate assumption and is not guaranteed revenue. Unresolved records may reflect missing source files rather than true leakage; confirm with the operator before acting.

Methodology: deterministic, versioned reconciliation (v0.2). Every payment is classified by a fixed precedence; each sub-score starts at 100 and is reduced by the severity-weighted density of its anomalies. Reproducible and explainable ? decision support, not a certification.
